

ROMIOS GOLD RESOURCES INC.

MANAGEMENT'S DISCUSSION AND ANALYSIS

For the nine months ended March 31, 2019

ROMIOS GOLD RESOURCES INC.

Management's Discussion and Analysis – March 31, 2019 As of May 23, 2019

The following management's discussion and analysis ("MD&A") of the financial condition and results of operations of Romios Gold Resources Inc. ("Romios" or the "Company") constitutes management's review of the factors that affected the Company's condensed interim consolidated financial and operating performance for the nine months ended March 31, 2019. The MD&A was prepared as of May 23, 2019 and should be read in conjunction with the unaudited condensed interim consolidated financial statements ("Financial Statements") of the Company for the three and nine months ended March 31, 2019 and the audited consolidated financial statements of the Company for the year ended June 30, 2018, including the notes thereto. Unless otherwise stated, all amounts discussed herein are denominated in Canadian dollars. These Financial Statements of the Company have been prepared in accordance with International Financial Reporting Standards (IFRS) as described in Note 2 to the Financial Statements.

Executive Summary

Romios is a Canadian mineral exploration company with a primary focus on gold, copper and silver. Its projects are located in Ontario, British Columbia, Quebec, and Nevada.

The Company expects to start a diamond drill program at Atim Lake North, part of the Lundmark-Akow Lake property in Ontario, commencing in a matter of weeks. A number of short holes will be drilled in the same banded iron formations that host the 7 million ounce deposit at the Musselwhite gold mine 18 km to the south. This program is a follow-up to the 2017 discovery hole drilled at the southern end of a 10 km long horizon, which the Company believes has the potential to host massive multiple sulphide deposits.

In the northwest part of the Golden Triangle in BC, the Company expanded its land holdings at and near the JW Property and weather permitting will start additional exploration work leading up to a summer diamond drilling program designed to follow up on historical reports on work carried out on the property which suggests a possible massive porphyry deposit.

Exploration and evaluation costs during the year ended June 30, 2018 were \$466,064, with \$253,490 incurred on the July-August 2017, and \$194,617 on the February, 2018 airborne magnetic and VTEM™ Terrain Time Domain electromagnetic survey over three of the Company's exploration targets on its Newmont Lake Property in the "Golden Triangle" of British Columbia; the Northwest Zone, Ken Zone and the Dirk claims which includes Burgundy Ridge. In the nine months ended March 31, 2019 an additional \$175,405 was spent on field work on the BC properties, which comprise 815 square km. An update on the work done in October 2018 is included in the "**Mineral Exploration, Golden Triangle Area Properties**" section of this MD&A.

In September, 2018 the Company signed a binding Letter Agreement with Crystal Lake Mining Corporation ("CLM") whereby, over the next three years CLM can earn a 100% working interest in the Newmont Lake Project (the "Property") comprising approximately 438 square kilometres. A definitive agreement (the "Agreement") replaced the Letter Agreement in December, 2018 and was subsequently amended. The consideration set out, among other things, the issue of 12 million common shares by CLM to the Company over three years, of which the first 4 million shares were issued on receipt of regulatory approval of the transaction in February 2019; the payment of \$2 million in cash option payments, of which \$250,000 was paid upon signing of the Letter Agreement, \$500,000 was paid on receipt of regulatory approval and \$250,000 is due 90 days after March 29, 2019. A further \$1 million will be payable upon CLM earning its 100% interest in the Property through the expenditure of \$8 million on the Property over no more than a 3-year period. CLM has announced its intent to exceed the required \$3 million to be spent in 2019. Romios retains a 2% Net Smelter Returns Royalty ("2% NSR") on the Property, or on any after-acquired claims within a 5 km radius of the current boundary of the Property. The 2% NSR may be reduced at any time to a 1% NSR on the payment of \$2 million per 0.5% NSR.

CLM undertook an exploration program pursuant to the terms of the Letter Agreement and on November 2, 2018 CLM reported that it had completed drilling six reverse circulation ("RC") drill holes, four on the Burgundy Ridge Zone, and two on the Northwest Zone of the Property. Mineralization was intersected but due to the limitations of the drill, the holes drilled were not long enough to reach the intended target.

CLM's expenditures on the Property are not included in the Company's reported exploration costs.

On December 4, 2018 the Company announced that it had finalized a definitive agreement dated November 29, 2018 (the "Definitive Agreement") with CLM to option the Property.

On January 11, 2019, at the Annual and Special Meeting of Shareholders, the shareholders of the Company approved the Definitive Agreement with CLM to option the Newmont Lake Property, subject to the approval of the TSX Venture Exchange, which was obtained on January 21, 2019.

On February 5, 2019, the Company announced that the date for receipt by CLM of regulatory approval of the Definitive Agreement had been extended to February 22, 2019. CLM received the approval on that date.

Recent property acquisitions:

In the vicinity of the Lundmark-Akow Lake claims, two blocks of cell claims were acquired in April, 2018,

Block #1 comprises 91 cell claims, approximately 1,777 hectares (4,391 acres), adding 6 km of what appears to be the same conductive formations that host the Atim Lake North massive sulphide type horizon discovered in 2017. There is no public record of any past drilling on this target. An airborne survey is planned for the winter of 2019, followed by drilling.

Block #2 comprises 79 cell claims, approximately 1,540 hectares (3,805 acres), 10 km northwest of the Lundmark Lake area. These claims cover a conceptual grass-roots gold target within a major bend in the North Caribou Lake greenstone belt.

In March 2019, 7 claims totalling 137 hectares were added to the Lundmark-Akow Lake property after receipt of the VTEM survey results. Another 8 claims totalling 158 hectares were acquired in the same month on grass-roots targets south of the Musselwhite mine. A large block of 125 cell claims totalling approximately 2,460 hectares was acquired by staking in February and April 2019 southeast of the Musselwhite gold mine to cover a conceptual gold target.

In the Golden Triangle, the Company acquired by staking, 17 claims covering 6,506.3 hectares, 1.4 km west of the JW property in the northwest part of the Triangle in September, and in December, 4 additional claims covering 1,832 hectares adjoining the Andrei claims. In March, 2019, five additional claims covering 791 hectares were acquired by staking over a historic prospect 11 km northeast of the Andrei claims. Initial exploration of the new claims is planned to take place in the summer of 2019.

Financings:

On October 2, 2018 the Company closed the first tranche of a non-brokered private placement of flow-through units and working capital units, raising an aggregate of \$555,000 for the continuation of exploration activity and for working capital purposes. On November 2, 2018 the Company closed the final tranche, increasing the aggregate raised to \$605,000.

On December 21, 2018 the Company closed the first tranche of a non-brokered private placement of flow-through units and on December 31, 2018 closed the final tranche, raising an aggregate of \$614,750 for the continuation of exploration activity.

In addition to the above private placements, by the end of February 2019, the Company had received option payments of \$750,000 and 4 million shares of CLM with a market value of \$1.2 million, under the Agreement whereby CLM has an option to acquire the Newmont Lake Property.

Mineral Exploration

Ontario

Lundmark-Akow Lake

The Company expects to start a diamond drill program at Atim Lake North, part of the Lundmark-Akow Lake property in Ontario, commencing in a matter of weeks. A number of short holes will be drilled in the same banded iron formations that host the 7 million ounce deposit at the Musselwhite gold mine, 18 km to the south. This program is a follow-up to the 2017 discovery hole drilled at the southern end of a 10 km long horizon, which the Company believes has the potential to host massive multiple sulphide deposits.

The airborne magnetic and VTEM™ Terrain Time Domain electromagnetic survey completed in March 2019 over approximately 6.5 km of the projected strike length of the stratigraphy hosting the Cu-Au-Ag-Co volcanogenic massive sulphide (VMS) horizon discovered in 2017 at Atim Lake North. There is no record of any drilling along this target.

Geological and geophysical surveys commencing this summer will be followed-up with a diamond drilling program, budgeted at \$600,000.

A Memorandum of Understanding has been signed with the North Caribou Lake First Nation covering the proposed 2019-22 program.

British Columbia

Golden Triangle Area Properties

The Company's total land position in the Golden Triangle Area comprises 81,497 hectares (201,384 acres). The acquisition cost of the properties was \$4.3 million, with the exploration and evaluation cost over the years totalling \$20.8 million. A portion of the Company's land position is currently under option to CLM under terms set out in the **Executive Summary** above.

Northwestern British Columbia hosts a number of significant ore deposits in the vicinity of Romios' claims including copper-gold porphyry (e.g. Red Chris, Galore Creek) and VMS gold deposits (e.g. Eskay Creek) as well as precious-base metal vein deposits (e.g. Johnny Mt. and Snip). The Federal and British Columbia governments have funded the Northwest Transmission Line bringing the electrical power grid close to the Newmont Lake Project area. Road access and the provincial power grid will facilitate the construction of infrastructure and help expedite project development when the exploration work is further advanced. The 195 megawatt Forrest Kerr run-of-river hydroelectric facility is within 20 kilometres of the Newmont Lake Property, has been operating since 2015, and was followed by the Volcano Creek and the 66 megawatt McLymont Creek facility, all three connected to the provincial power grid.

A summary of the past work on the main prospects can be found in the MD&A for the year ended June 30, 2018 or on the Company's website www.romios.com

Newmont Lake Property update:

On February 5, 2019 (news release) the Company reported the following results of its exploration work carried out in September-October 2018.

Ken-Glacier Cu-Au-Ag Skarn Zone

Two lines of chip sampling were completed at the Ken Zone across a large iron carbonate vein which is exposed for up to 8 m in width and at least 25 m in length. They returned assays of 6.0 m @ 2.28% Cu and 7.9 g/t Au plus

4.3 m @ 1.32 % Cu and 4.75 g/t Au. This and other smaller veins in the area appear to be part of a widespread network ranging from local very high grade Cu-Au-Ag-(Co)-carbonate veins (e.g. 10.4% to 11.5 % Cu, 30.3 to 32.5 g/t Au, <1 to 135 g/t Ag and 372 ppm to 635 ppm Co across widths of 0.5 to 1.0 m; reported in Romios News Release dated September 10, 2018) to broad zones of barren background iron carbonate alteration. It is believed that this vein hosted mineralization is part of a >10 metre thick iron rich halo around the skarn horizons and it provides an additional promising drill target flanking the skarns. The apparent source pluton for the mineralizing fluids was found 300 metres from the Ken Zone and the intersections of the skarn layers with that pluton is now a high-priority drill target for 2019.

Burgundy Ridge Cu-Au-Ag Skarn Zone

Mapping and sampling on the >400 m long Burgundy Ridge skarn in September 2018 identified a number of well mineralized boulder trains assaying from 1.78% to 5.4% Cu, 0.22 to 2.37 g/t Au and 7 to 54 g/t Ag (samples are individual grabs or composites from up to 10 talus boulders). Outcrops of a newly recognized homogeneous copper-bearing skarnified dolomitic marble intermittently exposed across widths of 25-30 m returned assays ranging from 4.3 m @ 1.33% Cu, 2.85% Zn, 5 g/t Ag to 5.3 m @ 0.64% Cu, 1.34% Zn and 6 g/t Ag. The true width and continuity of this zone is uncertain but it was targeted by two RC drill holes drilled by CLM in October 2018. Mineralization was intersected but due to the limitations of this drill, the holes drilled were not long enough to reach the intended target.

Mapping of the Lower High Grade Zone revealed that the syenite dyke forming the core of this system widens from 5 m to 35 m before it disappears from view westward under an icefield. Chip samples along the edges of the dyke returned high grade assays in July 2018 (e.g. 3.8 m @ 2.58% Cu, 2.37 g/t Au, 46 g/t Ag and 7.4% Zn; previously reported). Three chip samples taken in September at the westernmost exposure returned values ranging from anomalous up to 1.77% Cu, 2.6 g/t Au and 26.4 g/t Ag, suggesting that the mineralization may extend under the icefield. Due to weather and time constraints this high-grade target could not be drilled by CLM in October 2018 and remains a high-priority drill target for 2019.

McLymont Fault Pyrite Vein

A >1 m wide Au-Cu enriched massive pyrite vein discovered in July south of the Northwest Zone has now been found at several sites over a length of 260 m along the NNE-trending McLymont fault. A one metre chip sample of this vein in July assayed 0.56% Cu and 0.99 g/t Au and grab samples from the northernmost outcrop in September range from 0.17 to 12.7 g/t Au, 2 to 12.4 g/t Ag and 0.04% to 0.4% Cu. The wide range in gold values and unknown total width of the pyrite vein warrant trenching and systematic channel sampling in future. It is unclear at this point if the pyrite vein is part of the plumbing system for the nearby Northwest Zone or a separate vein system.

Cuba Zones

High-grade Ag-Pb-Zn+/-Cu-Sb veins and newly discovered clusters of boulders were sampled during a brief examination of the Cuba North and South showings near the east margin of the Newmont Lake graben. Mineralization is found within wide zones of coarse barite and carbonate veins in a prominent N-S fault cutting Permian limestone. Various grab samples returned individual metal values ranging from 55 to 833 g/t Ag, 0.002% to 9% Pb, 0.36% to 10.3% Zn, 0.02% to 0.64% Cu, and 0.008% to 0.34% Sb. The precise source of the most mineralized float is uncertain and warrants further investigation by geophysics (IP), soil sampling and potentially diamond drilling.

Other Properties

Trek Property, BC

The Trek Property is located near to the proposed site of the processing plant for the Galore Creek project. During the 2011 exploration season an exploration program costing in excess of \$6 million was completed on the Galore Creek area properties. Fifteen diamond drill holes totalling 7906 metres in length were drilled on the Trek Property, with sulphide mineralization intersected in all of the holes, providing a greater definition and understanding of the copper-gold-silver mineralization in the upper portion of the North Zone and the identification of a new area of mineralization referred to as the "Lower Breccia Zone" discovered underlying the known main body of mineralization at the North Zone. Combined, these areas form a mineralized structure measuring

approximately 700 metres long, 400 metres wide and up to 800 metres deep. The structure remains open in several directions and adds credibility to the belief of the existence of a major mineralized porphyry system on the Teck Property.

Highlights of the drilling include a 32 metre zone which averaged 2.06% Cu, 1.05 g/t Au and 26.01 g/t Ag in hole TRK 08-01, a 22 metre zone that assayed 1.25% Cu, 22.43 g/t Ag and 0.05 g/t Au in hole TRK 11-32, and in hole TRK11-35 a 2.15 metre zone of 7.87% Cu, 2.17 g/t Au and 40.3 g/t Ag.

The Company expects to initiate a review and compilation of past results and a new exploration program on the property in 2019.

Timmins-Hislop

On June 11, 2018 the Company completed the sale of the Company's Timmins Hislop property in exchange for 178,321 McEwen Mining Inc. ("McEwen") common shares then valued at \$500,000. Romios retains a 2% net smelter return royalty, with McEwen having the right to purchase 1% from the Company for \$2 million.

Nevada

Romios' Scossa Gold property is located 6 miles from the Rosebud Mine and 8 miles from the Hycroft Mine in northwestern Nevada. The property operated as a high grade, underground gold mine in the 1930s and encompasses a number of gold-bearing veins. Thirty historical drill holes were completed to test a number of gold-bearing epithermal quartz breccia veins and gold was found in every hole. Two holes encountered gold grades of 10.6 oz/ton and 8.6 oz/ton at the 145ft-152ft level. There has been no current activity, but additional drilling and exploration is justified to advance this prospect. A compilation of past work and a brief program of detailed mapping is planned for 2019.

Outlook

Ontario

The diamond drilling program at Atim Lake starting late May is expected to result in significant new information this summer, and the 10 km strike length being investigated and drilled could result in important discoveries.

BC

CLM in conjunction with geological input from Romios is planning to spend \$3 million or more on the Newmont Lake Property in 2019 starting as soon as weather conditions permit. Based on the extensive data from past ground and diamond drill results, this summer's work could be very exciting. The retreat of glacier ice has opened up access to new drill sites and exposed mineralized areas and key geological features.

Romios expects to be active this summer on its other BC properties including Trek and particularly on the JW Property in the northwest area of the Golden Triangle, to start as soon as weather and accessibility for drilling permits.

Financial

The Company's cash and working capital positions have significantly improved and can support active programs in both provinces. The Company continues to pursue financing opportunities, including joint ventures and strategic alliances. Management anticipates that it will be able to raise additional funds as required, to continue its exploration and evaluation programs.

Results of Operations

Exploration expenses incurred during the nine months ended March 31, 2019, totalled \$309,626, compared to \$466,064 in 2018, in both years split between BC and Ontario.

General and administrative expenses for the three months ended March 31, 2019 were \$140,418 compared to \$140,745 in 2018; there was an increase in professional fees, \$38,055 (2018 - \$20,176), office and general to \$10,580 (2018 - \$6,459) offset by decrease in shareholder communication costs to \$35,752 (2018 - \$41,410) and share based compensation to \$4,132 (2018 - \$23,012).

The Company's net loss and comprehensive loss, including the amount spent on exploration, for the three months ended March 31, 2019 was \$274,450 compared to \$331,333 in 2018.

General and administrative expenses for the nine months ended March 31, 2019 were \$445,592 compared to \$349,463 for the same period in 2018; the difference was caused by an increase in professional fees to \$129,732 (2018 - \$67,658), management fees and salaries to \$159,750 (2018 - \$148,763) and in shareholder communication costs increasing to \$95,465 (2018 - \$70,952) offset by decreasing in share based compensation to \$19,488 (2018 - \$35,951).

The Company's net loss and comprehensive loss, including the amount spent on exploration, for the nine months ended March 31, 2019 was \$863,275 compared to \$774,382 in 2018.

Selected Quarterly Information

Issue Costs

Date	Finder's fees	Brokers Warrants	Price	Expiry
July 14, 2017	\$3,500	70,000	\$0.05	July 14, 2018
November 24, 2017	\$9,660	161,000	\$0.06	November 24, 2018
December 21, 2018	\$43,200	664,615	\$0.065	December 21, 2019

On July 13, 2018 500,000 common shares were issued at \$0.05 to acquire the minority interest in the Royce/Pork and JW Property in the Golden Triangle of BC.

On October 2, 2018 the Company closed the first tranche of a non-brokered private placement of flow-through units and working capital units raising an aggregate of \$555,000 for the continuation of exploration activity and for working capital purposes. On November 2, 2018 the Company closed the final tranche, increasing the aggregate raised to \$605,000.

On December 21, 2018 the Company closed the first tranche of a non-brokered private placement of flow-through units and on December 31, 2018 closed the final tranche, raising an aggregate of \$614,750 for the continuation of exploration activity.

In addition to the above private placements, the Company received the first payment of \$250,000 from CLM on the signing of the Letter Agreement regarding the Option of the Newmont Lake Property.

At March 31, 2019, the Company had working capital of \$2,283,766 after providing \$687,448 for amounts due to related parties, compared to working capital of \$181,987 at June 30, 2018, after providing \$603,859 due to related parties.

On May 23, 2019 the cash position was \$1.5 million and working capital was \$2.6 million, after providing \$0.7 million for amounts due to related parties. As the Company has no operating revenue, costs are being funded with equity based private placements as well as option payments under the Agreement with CLM. The Company believes that it will have enough financial resources to operate for the next twelve months. The Company's ability to meet its obligations and continue as a going concern continues to be dependent on the ability to identify and complete financing opportunities. While the Company has been successful in raising equity capital to date, there can be no assurance that it will be able to do so in the future.

Common Shares

The Company is authorized to issue an unlimited number of no par value common shares. The following table provides the details of changes in the number of issued common shares.

	Number #	Amount \$
Balance, June 30, 2017	167,268,490	31,224,506

Common share purchase options

The Company has a stock option plan (the "Plan") for the benefit of directors, officers, key employees, and consultants. The total number of shares which may be reserved and set aside for issuance to eligible persons may not exceed 10% of the issued and outstanding common shares. At March 31, 2019, 8,300,000 common shares were reserved for the exercise of stock options granted under the Plan.

The following table details the changes in the common share purchase options during the period:

	Options #	Weighted-average exercise price \$
Outstanding at June 30, 2017	8,600,000	0.10
Granted	1,000,000	0.10
Expired, April, 2018	(250,000)	0.10
Outstanding at June 30, 2018	9,350,000	0.10
Expired, September, 2018	(1,050,000)	0.10
Options outstanding and exercisable at March 31, 2019	8,300,000	0.10

On May 5, 2019, 4,500,000 options to purchase common shares of the Company, exercisable at \$0.10 per share expired, unexercised, reducing the number of options outstanding to 3,800,000.

Outstanding common share purchase warrants

On certain issuances of common shares, the Company granted warrants entitling the holder to acquire additional common shares of the Company, and the Company granted warrants as consideration for services associated with the placement of such common share issues.

The following table details the changes in the outstanding common share purchase warrants:

	Number of Shares	Price Range \$
Balance June 30, 2017	5,464,603	
Private placement warrants issued	10,634,334	0.05 to 0.12
Expired	(5,464,603)	0.06 to 0.15
Balance June 30, 2018	10,634,334	0.05 to 0.12
Expired	(2,250,000)	0.05 to 0.10
Exercised	(70,000)	0.05
Balance September 30, 2018	8,314,334	0.06 to 0.12
Expired	(5,152,667)	0.06 to 0.12
Private placement warrants issued	11,980,961	0.065 to 0.18
Balance March 31, 2019	15,142,628	

The number of common shares outstanding on March 31, 2019 and May 23, 2019 was 198,397,016. Taking into account outstanding share purchase options and warrants, the fully diluted common shares that could have been outstanding on March 31, 2019 was 221,839,644.

The fully diluted common shares that could have been outstanding on May 23, 2019 was 217,339,644.

Related Party Transactions

During the three months ended March 31, 2019, the Company incurred related party expenses of \$70,085 (2018 – \$59,088) and \$220,997 for the nine months ended March 31, 2019 (2018 - \$160,063). These expenses are salary and consulting fees paid or payable to the Company's key senior officers, Tom Drivas, President and Chief Executive Officer, Frank van de Water, Chief Financial Officer and John Biczok, Vice-President, Exploration effective December 13, 2017 and Lawrence Roulston effective March 19, 2018. As at March 31, 2019, \$591,387 (2018 - \$461,268) was due to these related parties. Key management personnel were not paid post-retirement benefits, termination benefits, or other long-term benefits during the period ended March 31, 2019 and 2018.

Share-based compensation to key management and directors for the three months ended March 31, 2019 was \$4,132 (2018 - \$23,012) and for the nine months ended March 31, 2019 was \$19,488 (2018 - \$35,951).

During the nine months ended March 31, 2019 the company incurred expenses of \$88,227 (2018 - \$33,416) for legal fees to a law firm related to a Director of the Company, William R. Johnstone. At March 31, 2019, \$14,476 (2018 - \$3,034) was outstanding.

These amounts were expensed in the period incurred as administrative and general expenses or exploration expenses. Expenses and amounts paid and owing are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Contingencies and commitments

At March 31, 2019 the Company had a lease commitment to January 31, 2020 for its principle office location estimated to total \$13,500, and has \$10,829 on deposit as property reclamation bonds with various governmental agencies, recorded in prepaid expenses.

Carrying value of mining and exploration properties

The Company regularly reviews the carrying value of its properties for impairment to determine whether the carrying amount of these assets will be recoverable from future cash flows or from the proceeds of disposition of the properties. Assumptions underlying the cash flow estimates include the forecasted prices for gold, copper, silver and molybdenum, possible production levels, and operating, capital, exploration and reclamation costs, which are subject to risks and uncertainties. Management has determined that as at March 31, 2019 and May 23, 2019 there was no impairment of the carrying value of its properties.

The Company is not subject to externally imposed capital requirements imposed by a lending institution or regulatory body.

Off-Balance Sheet Arrangements

The Company does not have any off-balance sheet arrangements.

Financial Instruments and Other Instruments

The Company is required to disclose information about the fair value of its financial assets and liabilities. Fair value estimates are made at the balance sheet dates, based on relevant market information and information about the financial instrument. These estimates are subjective in nature and involve uncertainties in significant

matters of judgment and therefore cannot be determined with precision. Changes in assumptions could significantly affect these estimates.

The carrying amounts of cash and cash equivalents, HST/GST receivables and accounts payable approximates their fair values due to the short term to maturity of these instruments. Marketable securities are priced at the quoted closing stock market price on the period end date.

Risk Factors

An investment in the Company's securities is highly speculative and involves numerous and significant risks and should be undertaken only by investors whose financial resources are sufficient to enable them to assume these risks and who have no need for immediate liquidity in their investment. Prospective investors should carefully consider the risk factors that have affected, and which in the future are reasonably expected to affect the Company and its financial position. Please refer to the "Risk Factors" section in the Company's Financial Statements for the fiscal year ended June 30, 2018, available on SEDAR, www.sedar.com

Special Note Regarding Forward-Looking Statements

Certain statements in this MD&A may constitute "forward-looking" statements which involve known and unknown risks, uncertainties and other factors which may cause the actual results to differ materially from the statements made. When used in this report, the words "estimate", "believe", "anticipate", "intend", "expect", "plan", "may", "should", and "will", are intended to identify forward-looking statements, and reflect the current expectations of the management of the Company with respect to future events, and are subject to risks and uncertainties, such as reduced funding and general economic and market factors. New risk factors may arise from time to time and it is not possible for management of the Company to predict all of those risk factors or the extent to which any factor or combination of factors may cause actual results, performance or achievements of the Company to be materially different from those expressed or implied in such forward-looking statements. Investors should not place undue reliance on forward-looking statements as a prediction of actual results. The Company does not undertake or assume any obligation to update these forward-looking statements to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events, except as required by law.
